

**Contains:** *Purple top turnip, Radish, Kale*

### **Seeding Information**

*Seeding Rate:* 15 Lbs per Acre Broadcast Seeded  
*Seeding Dates:* July – August  
*Germination Times:* 14-21 days

### **Description**

HMG Drop-Tine Tubers is a fast growing blend of brassica species that provide thousands of pounds of high carbohydrate food through the fall and winter. This mix combines Turnips, Radishes and Kale to create a potent combo of early green forage along with energy rich foods to keep your deer in good body condition all winter long. During late fall and winter energy demands due to thermal stress and decreased body condition from the rut can put a strain on herd health and consequently next year's antler growth. Planting Drop-Tine Tubers will help keep your deer healthy and happy by providing the carbohydrates they need to stay warm. Don't leave anything to chance Plant HMG Drop-Tine Tubers this fall and make this your best season yet.

#### **Seed Mixture as a Percent of Bulk Weight**

<b>Purple Top Turnip</b>	<b>40.00%</b>
<b>Radish</b>	<b>40.00%</b>
<b>Hunter Brassica</b>	<b>20.00%</b>
